

THE GLORY HOLE

THE BIG BONANZA MINE

YOUR BEST CHANCE TO MAKE BIG MONEY

MAY BE

MAYBE you are one of those right here in Arizona, or elsewhere, who **HAD AN OPPORTUNITY** to get in on Inspiration right at the start, when you could have bought stock for about 25c a share. **MAYBE** you bought some Inspiration at 25c or 50c and have held it awhile, until now it is selling for **OVER \$60.00 A SHARE**. Did You?

MAYBE you are one of the "wise ones" who bought Little Daisy or United Verde Extension when it was going begging and those who bought it for a few cents a share were called suckers. **MAYBE** you did buy some and have held it until you can now sell it for over **\$40 A SHARE**.

MAYBE you bought Calumet & Arizona when it was considered a wildcat and the existence of ore there improbable and almost impossible. Today it is selling **FOR MORE THAN \$70 A SHARE**.

MAYBE you are one of those who have made fortunes by investing money in Meritorious Arizona Mining Stocks in the early stages and **MAYBE YOU ARE NOT**. Maybe you are one of the old-timers who saw Consolidated Virginia go from 17c a share to **OVER SIX HUNDRED DOLLARS A SHARE** when they struck their Bonanza Ore Body.

MAYBE you are one of those who would often like to have invested in some stock or other in the early stages of development when it was a chance whether the mine would make good or not, but didn't do it for fear you might lose or because you were afraid someone might laugh at you. **HE LAUGHS BEST WHO LAUGHS LAST—AND THE PEOPLE WHO TOOK A CHANCE AND BOUGHT INSPIRATION, LITTLE DAISY OR VERDE EXTENSION, CALUMET & ARIZONA AND MANY OTHER ARIZONA MINING STOCKS IN THE EARLY STAGES FOR A SMALL PRICE AND HAVE MADE BIG FORTUNES ARE THE ONES WHO ARE LAUGHING NOW. ALL BIG FORTUNES HAVE BEEN MADE BY PEOPLE WHO WERE NOT AFRAID TO TAKE A CHANCE.**

ARE YOU ONE OF THE MAYBE'S OR THE MAYBE NOTS?

GLORY HOLE STRIKE CONTINUES TO WIDEN

SALOME, Sept. 16.—The ore shoot at the new strike on the Glory Hole continues to widen as work progresses and is now over eight feet from center to center. It can hardly be called from wall to wall because there is ledge matter both above and below this pay-streak just opened up, the main quartz and spar ledge being many feet thick in some places showing prominent out-crops over a hundred feet in width, following the contact between the main andesite mass of the Glory Hole, or Bonanza Hill, as it is sometimes called, and the slaty schist, the general country rock of the district. The discovery was made about a hundred and fifty feet above the Glory Hole, at the crest of the main siliceous outcrop, which rises abruptly above the old Glory Hole pit, and the work during the past year has been following down on the strata of porous honeycombed quartz which carries the gold values. It has a well defined dip and strike and crops strongly for hundreds of feet each way from the present workings. The main cross fissures or fractured zone which carries the phenomenal gold values in the Glory Hole pit runs directly from the Glory Hole through the main ledge, cutting it at a point but a few feet away from where the new discovery has been made.

A force of men has been put at work in the gulch below the new strike and a tunnel will be run following the cross fissure on into the main ledge to a point underneath the new strike, where it is expected that large bodies of high grade encountered and developed; such points of intersection being the favorable points for such enrichments. The tunnel will be pushed as fast as possible and after striking the footwall and the lower continuation of the new strike, will be continued until the entire

width of the ledge has been cross-cut, when drifts will be run following the best ore shoots. Meantime, prospecting of the main ledge on the surface at favorable points will be continued in the expectation of finding other ore shoots cropping at or near the surface, possibly another Glory Hole with \$100 a pound jewelry ore like the famous original down the hill below the new strike. Several Oatman and Nevada parties are now figuring on securing leases at different points on the main big ledge and running crosscut tunnels to discover shipping ore.

W. L. Wilson, the New York and Oatman broker, head of the firm of Wilson & Co., is now negotiating for the Bonanza Hill property, joining the Glory Hole on the east and having similar surface showings to the Glory Hole, apparently being a continuation of the main Glory Hole ledge where it comes through the hill. Several other deals are under way and there is a general revival of interest in the gold belt west of town. Mr. Wilson has also taken over the Bear group, joining the Colubra property in the Tank Pass section, and is now in New York conferring with brokers there regarding the development of the property. Dan Murphy, superintendent of the Oatman Gold Mine, is here to look after the development of the Bear group and a 500-foot vertical shaft is contemplated, with cross-cuts to be run each hundred feet to cut the numerous parallel ledges cropping so prominently on the surface, many of them showing pay ore either on or within a few feet of the grass roofs.

The activity is increasing daily in the Tank Pass district, started by the opening up of high grade copper sulphides on the Colubra property at shallow depth and because of there being so many similar parallel ledges, nearly all of them having the same general character of surface showings as the Colubra and showing more or less copper-gold ore cropping at the surface, while several have already opened up sulphide ores within a few feet of the vein outcrops. Several hundred new claims have been located during the past few weeks and the

blasting done by the various owners doing little work sounds like a miniature European war, every afternoon at the close of the shift work of cars, gave way to long straight baggage lines, electric lighter and electrically operated.

HUMDINGER ORE IS TO BE TESTED OUT

Engineer Robt. H. Williams, general manager of the Roosevelt Lake Copper company, has returned to Tempe from a trip to Hayden and Winkelman, where he spent several days in the interests of his company. While in Hayden Mr. Williams arranged for complete tests of the several classes of ore which occur on the company's Great Humdinger Ledge property at Reno Pass. Several hundred pounds of the ore will be shipped here to the mill and to the smelter, and oil-dilatation and smelting tests will be made. Reports of these tests will be watched with keen interest by a number of mining men of the big copper camp, whose attention has been attracted by the samples which Mr. Williams had on display at the Hayden Drug company's store, as well as by many other people in the valley, who have become more or less familiar with the property. The great size of the ledge, the extent of the mineralized outcroppings and the great natural advantages for the economical removal of the ore deposits together with the proven bodies of both low and high grade ores, renders it practically certain that here at length will be located another of the great copper mines that constitute the industrial backbone of Arizona. Like numerous other treasure spots in Arizona, the only question now seems to be, who will be they with foresight enough to enlist in the army that shall go in and possess the land.

Commenting on the copper situation in Arizona at the present time Mr. Williams said to a Republican reporter: "To my mind Arizona, as regards copper, is today in much the same situation as the Pittsburgh district as we Pittsburghers all delighted to call it was seventeen years ago in regard to coal. Seventeen years ago this fall I enlisted as a claimant in a party of engineers who went up the Mononahela river to survey some of the coal mines that were being taken over by the new industrial giant—the Pittsburgh Coal company. Around forty big mines were gobbled up at figures that made the old time operators fairly giddy with profits, while the rival 'combine' or the Mononahela River Consolidated Coal and Coke company gobbled as many more. And how everybody did seem to delight in the gobbling and the being gobbled. Old methods of pro-

duction and marketing were abandoned; old meandering tunnels crowded with decaying timbers along with mule hitched tandem drew strings of cars, gave way to long straight baggage lines, electric lighter and electrically operated.

"And does Arizona copper present a similar opportunity?" "Who can doubt it, who reads even the current literary magazines, not to mention the technical and scientific press. With domestic consumption increasing even despite the prevailing high prices, with all the great copper-consuming industries practically living from hand to mouth, with engineers and technical experts sounding a warning that the exhaustion of the present sources of supply is the matter only of a generation, who can doubt that every mountain or valley of Arizona which contains a workable deposit of copper ore will soon be a mine of value?" It is probable that there is not a great copper mine in the state which is not now worth from a hundred to thousands of times its actual cost. It seems almost incredible that our government should take in mining deposits free to the citizen or group of citizens who will go out and take possession and work them, yet such is the case; and such being the case, it would seem that every citizen of Arizona owes it to his own future to get in if he possibly can do so, on some good copper property now while the opportunity is open. One can hardly make a mistake in putting money in any company which owns outright a good copper property, where the capitalization and amount of unsold treasury stock are right, and where there is sound business judgment and experience back of the management."

OATMAN ASTIR OVER RICH AZTEC STRIKE

(Special Correspondence.) OATMAN, Ariz., Sept. 15.—Oatman has been looking for a new strike. Today that sensation was expected when the Aztec, a Tom Reed holding exposed the vein while cutting a station on the 400-foot level. The camp is astir over the latest sensation and the dump experts have been working over time ascertaining the enrichment of the new strike. The Aztec property is located midway between the Big Jim and the Black Eagle, the latter a Tom Reed holding. It was early in the week that the strike was made, but no inkling of what had happened became known until samples were brought to town by the "scouts" and the news spread that another mine was uncovered in the Oatman district. The ore secured is identical to that opened in the Big Jim, United Eastern and the Tom Reed. The Tom Reed does not give out information to the press. Your correspondent, however, learned from a high authority that the strike is of great magnitude. In fact the new find is of the same magnitude and perhaps bigger than the Big Jim strike made some time ago. It was learned that some of the ore runs as high as \$5,000 a ton in gold. At the present writing, the Aztec is in the vein for a distance of twenty-five feet and there is no end in sight.

The Aztec shaft lies about 600 feet east of the Big Jim end line and is generally believed that the vein is the extension of the Big Jim. As a matter of fact, the vein is traceable into the Aztec ground. Taking this as the trend, the vein presenting such high values places the Big Jim in a stronger position than ever before.

The Big Jim is drifting toward the new strike and has about 500 feet more to go before they get out of their territory. At the present writing they are in ore that runs \$10 per ton, and getting richer all the time. (On the dump of the Aztec lies over thirty tons of the ore, and samples are freely taken. Various assays are being secured. Conservatively, it can be stated, that the vein thus far will run about \$50 per ton. The rich streak, however, may advance this figure.)

More joy is being experienced in the camp than for some time past.

The stock market is being watched closely and the jump of Tom Reed from \$1.50 to nearly \$2, in less than four days, shows the general result of the development.

The Tom Reed has not yet given out an official statement as to the discovery, but it is generally believed that the stockholders will shortly be notified.

Ever since the new management of the Tom Reed took charge, the key-note of the operations of the company was expansion. Nine new holes were sunk, and today the Tom Reed is foremost in the new development of the main belt of the district.

This more than speaks well for the Oatman field, as the company is spending thousands of dollars in the endeavor to prove the worth of the Oatman field.

In the Red Cloud shaft they are close to the 500-foot level, and already struck stringers of quartz that are highly encouraging.

A Peculiar Desire

A great deal has been written about Charlie Chaplin's ambition. The dramatic writers have it that he wants to play Hamlet that he yearns to star in the serious heavy drama of the speaking stage. Others have suggested that his greatest wish is to become famed as a violinist. The other day somebody invented the notion that Charlie secretly cherished a desire to be a landscape painter.

The question is now to be settled for all time. Chaplin's New York press agent wired him thus: "What is your greatest wish, your highest ambition, the thing you want to do most? Chance for a big story."

In five hours the answer came from faraway Los Angeles: "I have always wanted to know what would happen if I threw a plate of eggs into an electric fan.—Charles Chaplin."

AMERICAN-MEXICAN JOINT COMMISSION, IN CONFERENCE AT NEW LONDON, SEEKS WAY TO SECURE PEACE WITH HONOR

First meeting of commission in New York. Left to right, standing: Mr. Bunsal, Secretary of State Lansing, Eliseo Arredondo, Mexican ambassador designate, and Dr. Rowe. Seated: Dr. John R. Mott, Judge George Gray, Secretary Franklin K. Lane, Luis Cabrera, Ignacio Bonillas and Alberto J. Rami. Bottom: Hotel at New London, Conn., where conference is being held.

The men seated in the group are the members of the American and Mexican joint commission which will thresh out the differences between the United States and Mexico at a conference being held at New London, Conn.

GALVANIZED TANKS

GUTTERING, PIPING, BATH TUBS, CANTENS, IRRIGATION SUPPLIES, IN FACT EVERYTHING IN THE SHEET METAL LINE IS CONSTRUCTED IN MY PLANT AT SURPRISINGLY LOW FIGURES. I am using a great process in the restoration of old leaky tanks, rendering them good and useful tanks for several years to come. Talk this over with me, or write me of your requirements. All mail orders receive my personal and active attention.
